

HOUSING PROJECT

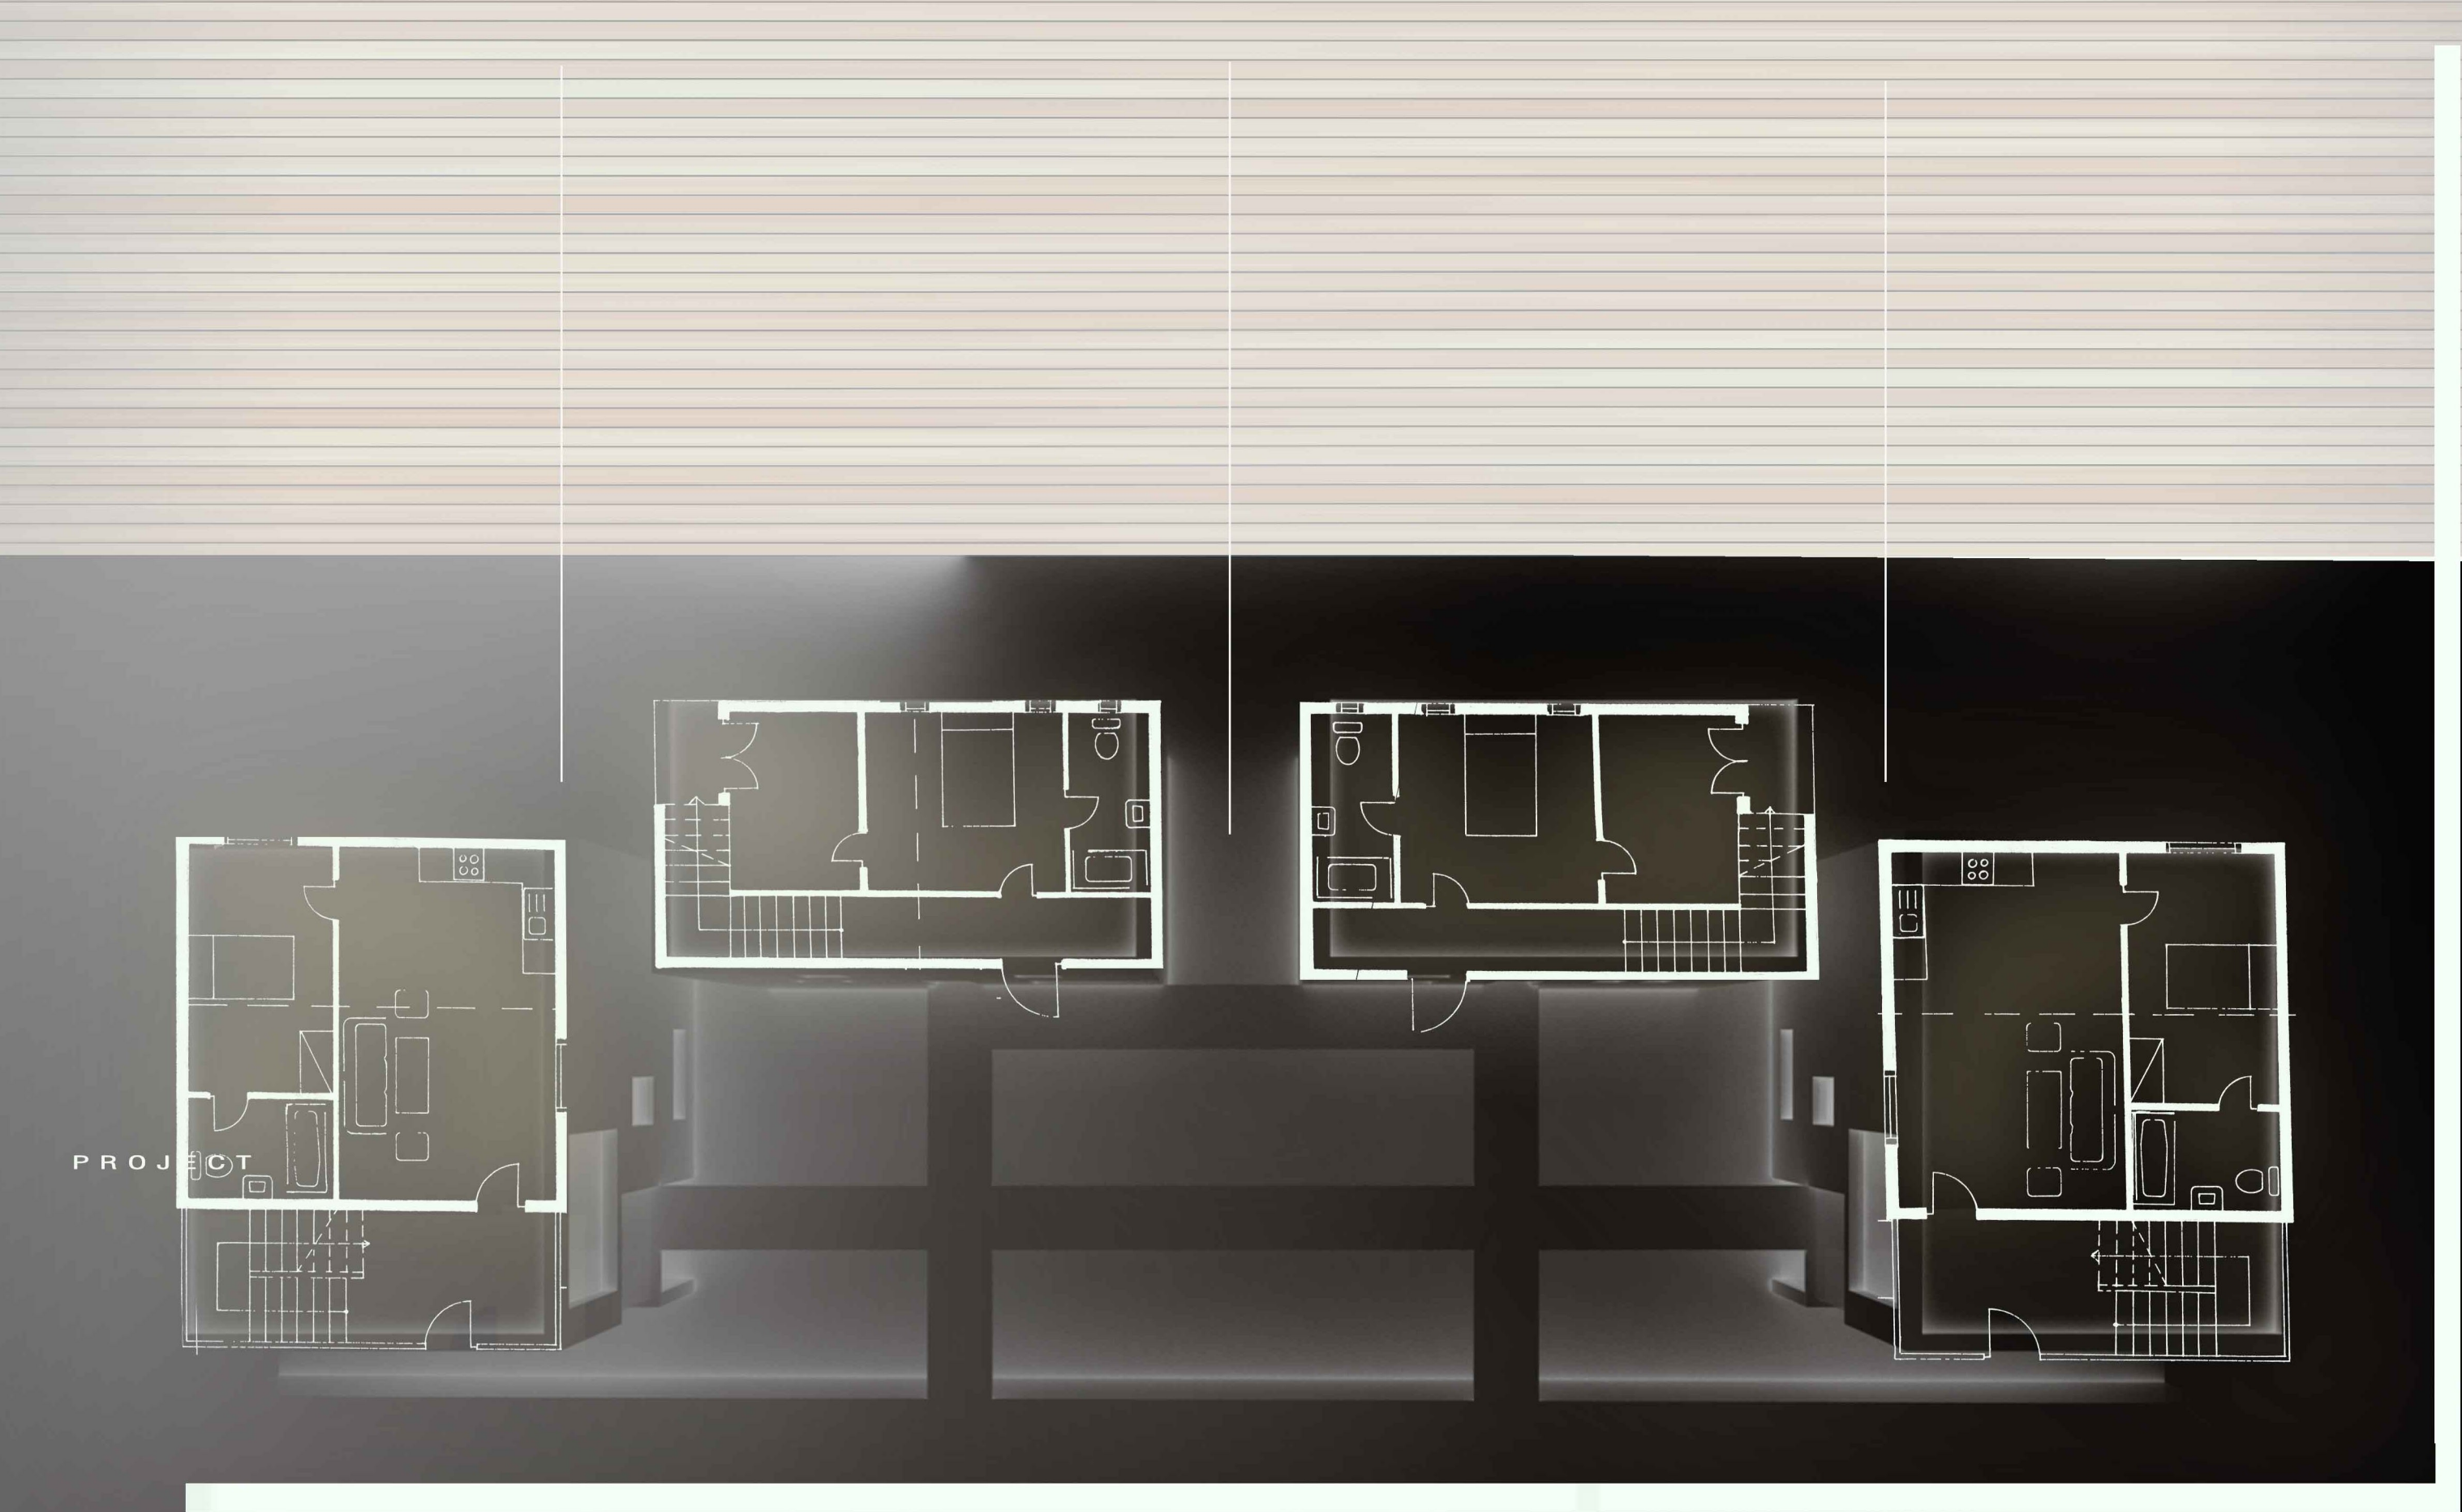

Location: Plymouth UK
Level: 2nd year > Term II
Presentation Date: May 2011 | Status: Individual work

The project aims at balancing the underground and the overground experience. Four buildings (two 4 bedrooms flats, two 2 bedrooms flats and two town houses) and four bridges create an indie-combine game between public, semi-public and private spaces. The wooden structures with the large glassings and the unique landscape underneath the bridges give a diversity note to a street where brick walls and brownish range prevail. The design tried to respect the typology of the area, while setting the foundations for the development of the neighbourhoods' landscaping and ecological building construction.
